

Earth Sciences Minor

The undergraduate program in the Department of Earth Sciences provides an understanding of the materials that constitute the earth and the processes that have shaped the earth from deep in its interior to the surface environment—geology. Geology applies all the basic sciences—biology, chemistry, mathematics, and physics—to understanding earth processes in the historical context of geologic time. It is a science that explores problems by combining field investigations with laboratory experiments and theoretical studies.

Geology also addresses many natural hazards—earthquakes, flooding, and volcanic eruptions—that affect humans. It addresses the impact of humans on the earth's surface environment, where we pollute rivers and ground water, cause rapid erosion and landslides, or attempt to re-engineer rivers and shorelines.

Earth Sciences Minor Requirements

Code	Title	Credits
Choose one of the following three-course sequences:		12
ERTH 101	Exploring Planet Earth	
	or EARTH 20: Dynamic Planet Earth	
ERTH 102	Exploring Earth's Environment	
	or EARTH 20: Earth's Surface and Environment	
ERTH 103	Exploring Earth History	
	or EARTH 20: History of Life	
Choose from the following courses: ¹		16
ERTH 210	Earth Science in the Movies	
ERTH 213	Geology of National Parks	
ERTH 300 - EARTH 499		
Total Credits		28

¹ 16 credits of earth sciences courses (exclusive of independent study courses) must be earned with course numbers greater than EARTH 299 (ERTH 210 and EARTH 213 are acceptable, however). No more than 8 credits may be applied to the minor from the following list: Earth Science in the Movies (ERTH 210), Geology of National Parks (ERTH 213), The Fossil Record (ERTH 304), Dinosaurs (ERTH 305), Volcanoes and Earthquakes (ERTH 306), Oceanography (ERTH 307), Geology of Oregon and the Pacific Northwest (ERTH 308).

Undergraduate minors must take all required courses for letter grades and complete them with grades of C– or better.
