

Quantitative Sedimentary Basin Modeling

**Continuing Education
Course Note Series #32**

Charles L. Angevine

Paul L. Heller

Department of Geology and Geophysics
University of Wyoming

Chris Paola

Department of Geology and Geophysics
University of Minnesota

AAPG

Published April, 1990 by the
Education Department of
The American Association of Petroleum Geologists
Tulsa, Oklahoma 74101-0979

TABLE OF CONTENTS

	Page
1. Introduction	1
2. The Primary Mechanisms of Basin Subsidence	3
Isostasy	3
Flexure	4
Thermal	5
3. Subsidence Analysis	7
Geohistory Analysis	7
Displaying the Data	9
Concepts of Geohistory Analysis	9
Example of Geohistory Diagram	11
Calculating Tectonic Subsidence	17
Example of Backstripping	19
4. Thermal Subsidence	20
Thermal Isostasy	20
Simple Stretching Model	20
Estimating Thermal Subsidence Parameters	24
Example I--Subsidence Example	27
Relative Sea-level Variations	28
Example II--Analysis of Subsidence at the COST B2 Well	29
Nonuniform Stretching Models	32
Finite Rates of Extension	33
Lateral Heat Conduction	35
5. Flexure of the Lithosphere	36
Isostatic Compensation	36
Elastic Plate Flexure	37

Simple Flexure Solutions	39
Forebulges	40
Sediment and Water Loads	41
Example I--A Fictitious Aulocogen	42
Distributed Load Distributions	44
Rectangular Load Distribution	45
Example II--The Aulocogen Reconsidered	47
Example III--Flexural Uplift Due to Erosion	49
Example IV--Thrust Belts and Foreland Basins, The Apennines	50
An Algorithm For Computing Deflections	52
Example V--Flexural Backstripping	55
Passive Margin Stratigraphy	56
Intraplate Stress	57
 6. Basin Classification and Subsidence Mechanisms	 59
Passive Margins and Rift Basins	59
Transform Basins	60
Foreland Basins	61
Forearc Basins	62
Intracontinental Basins	64
Summary	65
 7. The Role of Sedimentation, Subsidence, and Sea Level in the Formation of Foreland Basin Sequences	 66
Introduction	66
The Interaction of Sedimentation, Subsidence and Sea Level	67
Subsidence Versus Sea Level as a Control on Sequence Stratigraphy	69
Two-Phase Model for Foreland Basin Stratigraphic Sequences	70
Separating Tectonic from Eustatic Signals in Foreland Basin Sequences	77
Superimposed Tectonic and Eustatic Events	78
Conclusions	80

8. Passive Margin Stratigraphy	81
Third-Order Sedimentary Cycles	81
Pitman's Sedimentation Model	83
Monotone Sea-Level Falls	84
Periodic Sea-Level Fluctuations	86
Example I--U.S. Atlantic Margin	87
Time Delays in Sedimentation	88
Conclusions	89
9. Basin-Filling Models	90
Introduction	90
Strategy	92
Alluvial Systems.	95
Model Results from Quasiequilibrium Conditions	107
Model Results from Nonequilibrium Conditions	110
Discussion	112
Comparison with Field Results	114
Future Directions in Stratigraphic Modeling	116
10. Summary	119
11. References and Further Reading	120

ACKNOWLEDGEMENTS

These notes evolved over the past three years as we taught the course through the Geological Society of America and as a full-semester course at the University of Wyoming. We thank these organizations for their support. Many of the newer ideas presented herein come from our research on sedimentation, subsidence and sea level supported by National Science Foundation (grants EAR-8707041 to Angevine, Heller, and Paola, EAR-8904613 to Heller and Angevine) and the donors of the Petroleum Research Fund administered by the American Chemical Society (grants 20159-G8 to Angevine, 18287-G2 to Heller). Also, funding to Angevine from Amoco Production Company, to Heller from Exxon Production Research, and to Paola from Exxon Production Research is gratefully acknowledged. We appreciate discussions and comments by W. R. Dickinson, J. Thorne, L. Mayer, K. L. Kleinspehn, various students at the Universities of Wyoming and Minnesota, and the participants in our short courses. Judi Diamond did her best to reduce the number of run-on sentences, to change every which to a that and every while to a whereas, and to repair the punctuation; we take full responsibility for the remaining flaws. Lastly, we thank Michael Arthur for encouraging us to undertake this endeavor.

Although these notes were by and large a true collaborative effort, primary responsibility falls to Angevine for Chapters 4, 5, and 8; Heller for Chapters 2, 3, 6, and 7; and Paola for Chapter 9.
